

WHY UPGRADE TO RAPID ASSESSMENT KEY V2

Print Audit's award winning rapid assessment tool just got better! Rapid Assessment Key v2 offers **faster** and **more accurate** scanning via an entirely new user interface that is easier to use and more flexible than ever before.

Rapid Assessment Key v2 includes dozens of new features and improvements.

FASTER AND MORE ACCURATE

Enhanced Device Support

Print Audit is the **ONLY** print management company with access to all of the major office equipment manufacturers. This gives Print Audit an exclusive advantage and unmatched support for the widest range of devices.

Fast, Multi-threaded Design

The Rapid Assessment Key's new scan engine can scan/discover up to 25 devices **simultaneously**, with no limit to the total number of devices discovered per scan.

Increased Scan Detail

Support for detailed sub-counter information has been added for several manufacturers. This allows the key to gather additional information such as duplex page counts, large paper size, paper tray levels and more.

Compact & Efficient Software Architecture

The scanning software has been re-written from the ground up in C++ to require as few dependencies as possible. The result is considerably faster performance in all areas including scan times.

Support for SNMP version 2

The Rapid Assessment Key v2 will scan using SNMP version 2 on supported devices. Using SNMP version 2 produces significantly faster scan times than SNMP version 1.

BETTER HARDWARE

All new USB Key

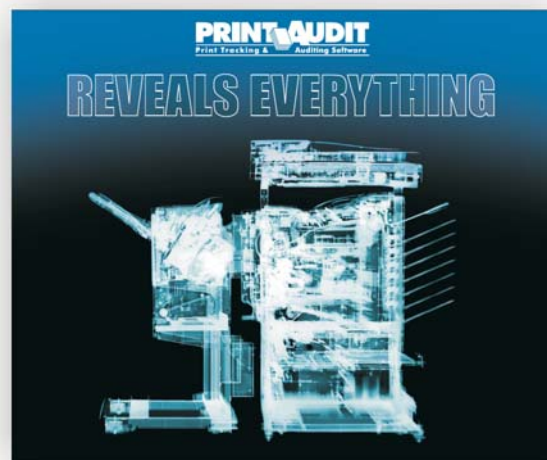

Rapid Assessment Key v2 now operates via a new 256MB, ultra-fast USB 2.0 thumb drive.

Smaller Form Factor

Our new USB is considerably smaller and more durable than Rapid Assessment Key v1.

Unique Design

A special swivel design ensures that you never lose the cap.

EASIER TO USE

Revamped User Interface

The Rapid Assessment Key's user interface has been completely re-designed to be more intuitive and easier to navigate.

Site Management

The Rapid Assessment Key v2 has a Site Management tool which lets you easily switch between customer sites. This allows effortless organization and management of an unlimited number of sites.

Site Scan History

You can now quickly and easily see all devices that have been discovered at a site, along with the latest scan information for each device using our Site Scan History view. A new Color Coding feature allows you to see at a glance which devices have stale data.

Configurable Views

Scan result columns can be moved, hidden and sorted to your specifications. Data can be exported in a comma-delimited format using the view you have created.

Faster Updates

The Rapid Assessment Key v2 uses an automated update capability. The mapping information needed to scan any copier is contained in a single, compact file which is updated automatically via a download from the Internet. This means that support for new devices is added to your Rapid Assessment Key v2 as soon as it becomes available, without you having to look for it.

Integrated Reporting

The Rapid Assessment Key's powerful reporting tools are now accessible directly from the scan application so reports can be produced immediately after the scan is complete.

Easier Imports and Exports

Rapid Assessment Key v2 data can be exported into formats used by third party proposal generation systems such as Compass, Toshiba Encompass and NextGen. You can also import and export scan data from Rapid Assessment Key v1.

Automatic Backups and Database Maintenance

At startup, Rapid Assessment Key v2 automatically makes backups of your data and performs simple database maintenance activities to ensure that your data integrity is preserved.

Simple Scan File Management

All scans made with Rapid Assessment Key v2 are stored in a single .dat file on the key. This makes it easy to backup your data, as well as eliminating the need to keep track of multiple, separate scan files.
